

MASTER

Computer Engineering and Information Technology
"Network and Cyber-Security"

Target Skills

- to be employed in companies in which the knowledge and skills of computer network management and maintenance are required;
- to continue to pursue an education path towards a doctorate with a focus on information security;
- be well versed in the challenges and problems of secure operating systems, secure applications, secure networks, use of cryptography and key management;
- understand how a security policy is developed and how policies guide technological decisions;
- to have practical experience in situations that simulate real-world scenarios and with all technical or theoretical situations through extensive laboratory work, which have been designed by today's scientists in the field of information security.
